

Meet Chase

Chase came in through our cruelty department on July 16. He has demodectic mange caused by an infestation of the Demodex mite, Chase has an old puncture wound to his eye that has resulted in a deep infection in the eye, both ears are infected, and his skin is raw with open sores. He has won our hearts with his amazing personality and loving demeanor. Chase is currently on antibiotics, antifungal agents, eye medications, Benedryl and pain medication. Now that he is 2 weeks into treatment, we will be starting Ivermectin treatment to treat the demodectic mange. Chase has a way to go yet, but this boy is now on the road to recovery.
